Chapter 1: Introduction

This project is a simple Login and Countdown Timer Web Application developed using Python and Streamlit. It provides a login system and a countdown timer with alarm notification.

Chapter 2: Objectives

- To build a login system using Python
- To create a countdown timer
- To show real-time updates
- To trigger alarm when time ends
- To design UI using Streamlit

Chapter 3: Tools and Technologies Used

Programming Language: Python
Framework: Streamlit
Libraries: time, streamlit
Platform: Web Browser

Chapter 4: System Design

Login System: Username/password authentication
Timer System: Countdown using loop and sleep function
Alarm System: Audio alert when timer finishes

Chapter 5: Implementation

Login uses Streamlit input fields and session state.
Timer uses loop and time.sleep(1).
Alarm uses HTML audio in Streamlit.

Chapter 6: Results and Output

Login page authenticates user.
Timer counts down in real time.
Alarm plays when time ends.

Chapter 7: Conclusion and Future Work

Project successfully demonstrates login and timer system.
Future improvements include database integration, registration system, and advanced UI.
